

Cibachrome Chemistry Information

Dear All,

After Ilford Imaging Switzerland's bankruptcy in December 2013, the Marly Innovation Center (MIC) has taken over the liquidation of the remaining stock of the swiss production plant.

MIC decided to support the Cibachrome users by continuing to supply the P3, P3X and P5 chemicals.

However, after depletion of the stock, MIC is no longer in a position to maintain supply. We worked these last months on providing a solution for the Cibachrome users in order to find a 3rd party supplier to secure the supply of the chemicals in the future.

We are therefore proud to announce that the company **DFI CHEM GmbH** will take over the manufacturing of the P3, P3X and P5 chemicals in the long term.

DFI CHEM was founded by former Ilford chemists and is now settled in the previous Ilford's labs at MIC. They use and master the original Cibachrome manufacturing processes.

We are confident that you will find in DFI CHEM the right partner to continue to work smoothly with this unique product in the future.

You can place your order from now on for the chemicals to: **info@dfichem.com**

MIC still has some Ilfochrome Film in rolls and sheets available upon request, please contact **a.goumaz@m-innovationcenter.org** for any enquiry about Ilfochrome Film.

Thank you for the time and passion you dedicated to this product throughout the years.

Alex Goumaz
